INTRODUCTION OVERVIEW

HBurn is the heart of the Hederagon ecosystem which operates on the cutting-edge Hedera network with a total supply of 2.1 Million Tokens. HBurn is designed to drive the economy of the Hederagon, combining deflationary mechanics with robust DeFi functionalities and Decentralized Governance.

WHY HBURN

HBurn will be used to buy In-Game assets

HBurn tokens can be staked to earn yield

HBurn will be used to vote in DAO

HBurn is Deflationary by nature with each transaction around each module is contributing towards burning mechanism

WHAT IS HEDERAGON

Hederagon is a play to earn dragon game which has two different modes :

1. PVP (Play to Earn)
2. Strategy mode(Loot to Earn)

UTILITY OF HURN

How HURN is Deflationary

HURN gets burned .1% on each transaction. When in game assets are bought 10% of the tokens gets burned. When player feeds their dragons to enhance the capabilities tokens gets burned entirely. In DAO user requires 1 token to vote that token gets burned entirely. In our DEX if user swaps the token 1% of token gets burned

How Staking works

There are 2 types of staking
Token Staking : 8% of total supply is dedicated for token holders stakers its to incentivise the early adopters it will rolled out within first 6 months of the launch
Land NFT staking its a NFT staking for land owners who stake their NFTs to earn yield upon staking they earn rewards but they need to defend their land as other stakers can take over

How DAO works

DAO proposals can be created by only team and Hurn Partner NFT holders. The voting allocation of DAO divided among three players : Partners 20%, Team 30% and Community 50%. The proposal can only be passed upon 60% of the votes are in favour making it fair as 2 parties need to strongly agree to get the proposal passed making it fairly decentralised

HEDERAGON

PVP Mode: Players compete in 1-1 battles to earn battle points, if they rank in top 10 weekly leaderboard they earn HBurn Tokens which are collected from the sales made on Marketplace.(Refer to page 7 in ecosystem diagram).

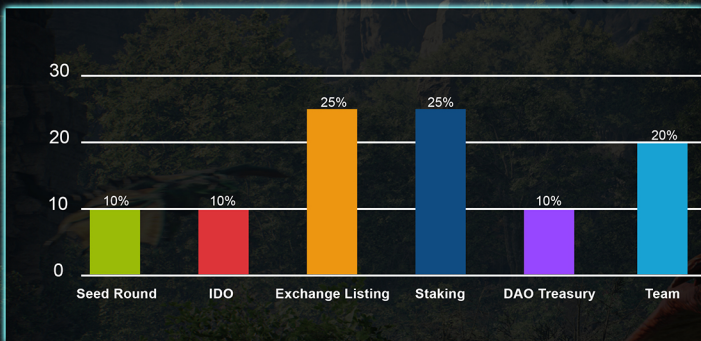

Strategy Mode: In strategy mode one needs to hold Land NFTs and build their empire on top of it. Players can create alliances for better defence and coordinated attacks on other land owners as once you are in strategy mode your land is always as stake for that purpose players can stake their lands to earn yield as they survive or earn higher yields by taking over other lands. As each land has specified number of tokens allocated.

CONCLUSION

HBurn Token stands as the cornerstone of the Hederagon ecosystem, merging the innovative capabilities of the Hedera network with a deflationary economic model and decentralized governance. As the native asset of Hederagon, Hburn Token offers a multifaceted approach to decentralized finance, encompassing staking, liquidity provision, and marketplace transactions.

Key Takeaways

- **Deflationary Value:** HBurn Token's unique burn mechanism ensures a decreasing supply over time, enhancing its value and fostering a sustainable economic environment.
- **Decentralized Governance:** Empowered by DAO principles, HBurn Token holders have a direct role in shaping the future of the Hederagon ecosystem through voting and proposal submission.
- **Marketplace Utility:** As the primary utility token, HBurn facilitates a range of DeFi activities, including staking, trading, and participation in exclusive digital asset offerings.

Future Outlook

With a clear roadmap and a commitment to leveraging the Hedera network's advanced features, HBurn Token is poised to drive significant growth and innovation in the DeFi and GameFi space. The integration of community governance and deflationary mechanics ensures a balanced and prosperous ecosystem for all participants.
